# Docs for NetApp Data Availability Services

We've added docs for a new NetApp service. Documentation for NetApp Data Availability Services is now available on [docs.netapp.com](https://docs.netapp.com).

NetApp Data Availability Services is a cloud-based service to manage data protection workflows from ONTAP primary to secondary storage systems to the cloud, and across multiple public clouds.

Go to the [NetApp Data Availability Services documentation](#) to learn how to get started.

The screenshot shows the NetApp Data Availability Services documentation page. The header includes the NetApp logo, a search bar, and a language selector set to English. The left sidebar contains a table of contents with links to 'What's new', 'About NetApp Data Availability Services', 'Deploying NetApp Data Availability Services', 'Deployment overview', 'ONTAP cluster and SnapMirror requirements', 'AWS, networking and security requirements', 'Completing the NetApp Data Availability Services configuration worksheet', 'Getting started with the NetApp Data Availability Services solution', 'Setting up NetApp Data Availability Services with the Launch Portal', and 'Installing a StorageGRID certificate on the ONTAP target cluster'. The main content area is titled 'Deployment overview' and includes links to 'Edit on GitHub' and 'Request doc changes'. The text explains that before using NetApp Data Availability Services (NDAS) to create and manage data protection workflows, several tasks must be completed in the ONTAP and AWS environments. A flowchart titled 'The following diagram provides an overview of NDAS prerequisite tasks and the privileges needed to complete them.' shows a sequence of four steps: 1. 'Verify ONTAP cluster and SnapMirror requirements' (Storage administrator), 2. 'Verify AWS, networking and security requirements' (Cloud and network administrators), 3. 'Complete the Launcher checklist' (Cloud administrator), and 4. 'Register NDAS with NetApp' (Cloud administrator). The steps are connected by downward arrows, and the 'Complete the Launcher checklist' and 'Register NDAS with NetApp' steps are grouped under the 'Cloud administrator' role.

Before using NetApp Data Availability Services (NDAS) to create and manage data protection workflows, a number of tasks must be completed in the ONTAP and AWS environments to deploy the NDAS app.

The following diagram provides an overview of NDAS prerequisite tasks and the privileges needed to complete them.
