# Docs for Cloud Compliance

Right before the end of 2019, we added content in the Cloud Manager documentation for the Cloud Compliance service.

Cloud Compliance is a data privacy and compliance service for Cloud Volumes ONTAP in AWS and Azure. Using Artificial Intelligence (AI) driven technology, Cloud Compliance helps organizations understand data context and identify sensitive data across Cloud Volumes ONTAP systems.

Cloud Compliance is operated and managed through Cloud Manager. You can access Cloud Compliance features from the **Compliance** tab in Cloud Manager.

Go to the [Cloud Manager documentation](#) to learn how to get started.

The screenshot shows a web browser window displaying the NetApp Cloud Docs page. The page title is "Getting started with Cloud Compliance for Cloud Volumes ONTAP". The URL is "docs.netapp.com/us-en/occm/task\_getting\_started\_compliance.html". The page features a sidebar with a navigation menu for "Cloud Manager 3.8 docs", including sections like "Release notes", "Concepts", "Get started", "Deploy Cloud Volumes ONTAP", "Provision storage", "Replicate and protect data", "Gain insight into data privacy", "Learn about Cloud Compliance", "Get started", "Gain visibility and control of data", "Generate reports", "Respond to a DSAR", "Disable Cloud Compliance", "FAQ", "Administer Cloud Volumes ONTAP", "Administer Cloud Manager", "Provision volumes for file services", "APIs and automation", and "Reference". The main content area has a heading "Getting started with Cloud Compliance for Cloud Volumes ONTAP" with a date of "01/16/2020" and "Contributors". Below the heading is a sub-heading "Complete a few steps to get started with Cloud Compliance for Cloud Volumes ONTAP in AWS or Azure." followed by a "Quick start" section. The "Quick start" section includes a list of steps: "1. Verify that your configuration can meet the requirements" and "2. Enable Cloud Compliance on Cloud Volumes ONTAP". The first step includes a list of requirements: "Ensure that the Cloud Compliance instance will have outbound internet access.", "Ensure that users can access the Cloud Manager interface from a host that has a direct connection to AWS or Azure, or from a host that's inside the same network as the Cloud Compliance instance (the instance will have a private IP address).", and "Ensure that you can keep the Cloud Compliance instance running." The second step is "Enable Cloud Compliance on Cloud Volumes ONTAP". The page also includes a "On this page:" section with links to "Quick start", "Reviewing prerequisites", "Enabling Cloud Compliance on a new working environment", "Enabling Cloud Compliance on existing working environments", "Verifying that Cloud Compliance has access to volumes", "Verifying that Cloud Manager can access Cloud Compliance", "Troubleshooting errors", "vCPU quota limit in Azure", "vCPU limit in AWS", and "Timeout error".
