Syntax highlighting

We've made it easier for you to view syntax for the most popular languages by adding highlighting.

For example, here's syntax for obtaining a user token from NetApp Cloud Central:

```
POST https://netapp-cloud-account.auth0.com/oauth/token
Header: Content-Type: application/json
Body:
{
  "username": "<user_email>",
  "scope": "profile",
  "audience": "https://api.cloud.netapp.com",
  "client_id": "UaVh0IXMWQs5i1WdDxauXe5Mqkb34NJQ",
  "grant_type": "password",
  "password": "<user_password>"
}
```

As you can see, we've also added a Copy button to make it easy for you to copy the syntax to your clipboard.

Here's another example that shows JSON output:

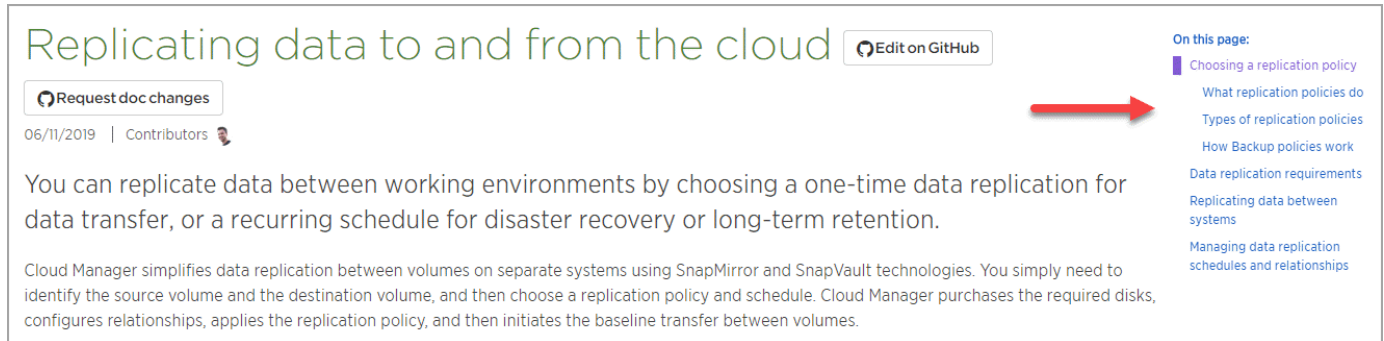

```
[
  {
    "header": {
      "requestId": "init",
      "clientId": "init",
      "agentId": "init"
    },
    "payload": {
      "init": {}
    },
    "id": "5801"
  }
]
```

We hope that you find this enhancement helpful!

Page-level navigation

Page-level navigation is now included on each page that has multiple sections.

This enhancement makes it easy for you to see where you are as you scroll, and to jump to a specific section on the page.

Docs for Converged Systems Advisor

Documentation for Converged Systems Advisor is now available on docs.netapp.com.

NetApp Converged Systems Advisor validates, monitors, and optimizes the deployment of your FlexPod converged infrastructure to ensure the best performance and availability for your business applications.

Go to the [Converged Systems Advisor documentation](#) to learn how to get started.

How Converged Systems Advisor works [Edit on GitHub](#)

[Request doc changes](#)

09/11/2018 | Contributors

Converged Systems Advisor is a software-as-a-service (SaaS) platform that consists of an on-premises agent and a cloud-based portal.

The following image shows the relationship between Converged Systems Advisor components:

```
graph LR; FlexPod[FlexPod] -- 1 --> Agent[Agent]; Agent -- 2 --> Portal[Portal];
```

The diagram illustrates the architecture of Converged Systems Advisor. It shows a FlexPod (1) connected to an Agent (2), which in turn connects to a Portal (3). The Agent is labeled with a gear icon and the word 'Agent', and the Portal is labeled with a cloud icon and the word 'Portal'.

Request doc changes

If you'd like to request changes to the docs and you'd rather not edit the source content directly, you can now provide feedback by clicking **Request doc changes**.

This new button appears at the top of each page:

Selecting the region [Edit on GitHub](#) [Request doc changes](#)

Cloud Volumes Service is available in several AWS regions, but the user interface (UI) is specific to a region. You must specify the region where you want to use for the service before you create a Cloud Volume.

When you click **Request doc changes**, you're prompted to create or sign in to your GitHub account (it's free and easy to create an account).

After you log in, a form to create a new GitHub issue appears. The text box is prepopulated with the title and URL of the page. Don't delete this information—it helps us identify the page where you found the issue.

A screenshot of a web form for submitting a new issue. At the top is a 'Title' input field. Below it are two tabs: 'Write' (active) and 'Preview'. To the right of the tabs is a rich text editor toolbar with icons for bold, italic, link, unlink, list, and other formatting options. The main text area contains the text: 'Page: [Selecting the region](https://docs.netapp.com/us-en/cloud_volumes/aws/task_selecting_region.html)'. Below the text area is a dashed line and a message: 'Attach files by dragging & dropping, selecting them, or pasting from the clipboard.' At the bottom left, it says 'Styling with Markdown is supported' with a small icon. At the bottom right is a green button labeled 'Submit new issue'.

Provide details in the text box, and then click **Submit new issue** to create an issue for your request.

We'll review your feedback and take it from there.

Docs for Cloud Insights

Documentation for NetApp's new Cloud Insights service is now available on docs.netapp.com.

NetApp Cloud Insights is a cloud infrastructure monitoring tool that gives you visibility into your complete infrastructure. With Cloud Insights, you can monitor, troubleshoot and optimize all your resources including your public clouds and your private data centers.

Go to the [Cloud Insights documentation](#) to learn how to get started.

Docs for Cloud Volumes ONTAP

The Release Notes for Cloud Volumes ONTAP are now available on docs.netapp.com.

Cloud Volumes ONTAP combines data control with enterprise-class storage features for various use cases, including file shares and block-level storage serving NAS and SAN protocols (NFS, SMB, and iSCSI), disaster recovery (DR), backup and archive, DevOps, databases (SQL, Oracle, NoSQL), or any other enterprise workload.

Go to the [Cloud Volumes ONTAP documentation](#) to review the Release Notes. If you need docs that

explain how to deploy and manage Cloud Volumes ONTAP, then you should refer to [Cloud Manager documentation](#).

Docs for Cloud Volumes Service for AWS

We've added docs for a new NetApp service. Documentation for Cloud Volumes Service for AWS is now available on [docs.netapp.com](#).

NetApp Cloud Volumes Service for AWS is a cloud native file service that provides NAS volumes over NFS and SMB with all-flash performance. This service enables any workload, including legacy applications, to run in the AWS cloud.

Go to the [Cloud Volumes Service for AWS documentation](#) to learn how to get started.

Docs for NetApp SaaS Backup for Office 365

We've added docs for a new NetApp service. Documentation for NetApp SaaS Backup for Office 365 is now available on [docs.netapp.com](#).

NetApp SaaS Backup is a secure, web-based, software-as-a-service (SaaS) offering that backs up your Microsoft Office 365 data to Amazon S3 storage, Microsoft Azure Blob storage, or StorageGRID Webscale object storage.

Go to the [NetApp SaaS Backup for Office 365 documentation](#) to learn how to get started.

Introducing NetApp Docs in GitHub

We're pleased to announce the launch of NetApp's first GitHub-based documentation site—[clouddocs.netapp.com](#)—which currently hosts documentation for Cloud Manager and Cloud Sync.

The documentation is written in AsciiDoc (a lightweight format similar to Markdown), stored in GitHub repositories, and served as HTML content on [docs.netapp.com](#).

This new documentation experience provides a few key benefits:

- Fast content updates

We're leveraging cloud and open source resources to support accelerated product release cadence.

- Community contributions

We've shortened the distance between NetApp authors and customers by providing the ability for anyone to recommend inline edits and enhancements.

- Responsive design

The site provides a responsive layout for any device that you use to access NetApp docs.

We plan to continually improve the site and add additional content over time. We hope that you like it and we look forward to any feedback that you might have.
